

Technical Concept

ANKY® Technical Casuals is a revolutionary concept, not only for the equestrian market, but also for other outdoor sports. It uniquely combines the ultimate in both comfort and fashion. ANKY® Technical Casuals works closely together with leading suppliers in the rapidly moving market of high-tech materials, Malden Mills®, DuPont®, Schoeller and Eschler. Each season we are looking for the latest developments in high-tech materials to optimise our climate controlled product line. The technology behind our concept has been tested in worldwide-recognised laboratories as well as in practical wear-trials with excellent results. Our ultimate goal is to allow people to perform at their best during all outdoor activities under all weather circumstances. The unique combination of yarns makes our garments comfortable 365 days a year.

All riding breeches are made of a Cordura®/Coolmax® combination which is exclusively delivered to ANKY® Technical Casuals by Schoeller, a highly recognised Swiss company. Cordura® is used on the outside for its strength and durability. In combination with the Coolmax® on the inside it takes care of moisture control.

A complete range of products and all latest info can be viewed on our website www.anky.com
